Abstract: The vascular flora of the Camili Biosphere Reserve Area (Borçka, Artvin) was studied between 2002 and 2005. In the area under review, 990 taxa belonging to 432 genera and 110 families were identified. Of the 990 taxa, 37 Pteridophytes and 953 Spermatophytes were detected. Spermatophytes also contained 7 Gymnospermae and 946 Angiospermae taxa. The richest 3 families are Compositae with 114 taxa (11.5%), Gramineae with 69 taxa (7.0%), and Leguminosae with 59 taxa (6.0%). The richest genera are *Veronica* L. and *Campanula* L. (15 taxa), followed by *Geranium* L. (13 taxa). The rates of taxa included in certain phytogeographical regions were as follows: 48.2% Euro-Siberian, 3.5% Irano-Turanian, 1.9% Mediterranean, and 46.4% multi-regional or of unknown phytogeographic origin. The life form spectrum of the taxa was as follows: hemikryptophytes 359 (36.3%), cryptophytes 272 (27.5%), therophytes 162 (16.4%), chamaephytes 130 (13.1%), phanerophytes 63 (6.4%), and vascular parasites 4 (0.4%). The endemism ratio is 2.3% (23 taxa). Threat categories were proposed for 73 taxa according to International Union for Conservation of Nature and Natural Resources (IUCN) Red List Categories.

Key Words: Artvin, biosphere reserve, Borçka, Camili, flora, Lesser Caucasus

Camili Biosfer Rezerv Alanının (Borçka, Artvin, Türkiye) Florası

Özet: Camili Biosfer Rezerv alanının (Borçka, Artvin) damarlı bitkiler florası 2002-2005 yılları arasında çalışılmıştır. Araştırma alanında; 110 familya ve 432 cinse ait toplam 990 takson kaydedilmiştir. Bu taksonların 953'ü Spermatophyta, 37'si Pteridophyta bölümüne aittir. Spermatophyta bölümünde, 7 takson Gymnospermae ve 946 takson Angiospermae'dir. Araştırma alanında en fazla taksona sahip üç familya sırasıyla Compositae 114 takson (% 11,5), Gramineae 69 takson (% 7,0) ve Leguminosae 59 takson (% 6,0). En zengin cins *Veronica* L., ikincisi *Campanula* L. (15 takson), ve üçüncüsü ise *Geranium* L. (13 takson)'dır. Taksonların, fitocoğrafik bölgelere göre dağılımları ise şöyledir: Avrupa-Sibirya % 48,2, İran-Turan % 3,5, Akdeniz % 1,9 ve coğrafi bölgesi bilinmeyenler veya birden fazla bölgede yayılış gösterenler % 46,4'tür. Taksonların hayat formlarına dağılımı ve oranları sırasıyla şöyledir: hemikriptofit 359 (% 36,3), kriptofit 272 (% 27,5), terofit 162 (% 16,4), kamefit 130 (% 13,1), fanerofit 63 (% 6,4) ve parazit 4 (% 0,4). Endemizm oranı % 2,3 (23 takson)'tür. IUCN tehlike kategorilerine göre 73 taksonun tehlike durumu değerlendirilmiştir.

Anahtar Sözcükler: Artvin, biosfer rezerv, Borçka, Camili, flora, Aşağı Kafkaslar

Introduction

Camili Biosphere Reserve, known as the first biosphere site of Turkey, is one of the 507 sites in 102 countries worldwide. It is one of the cradles of much younger postglacial forests of Central Europe and one of the few well-known refuges for tertiary flora in the Colchic region. The study area is not only located within

the Caucasus Hotspot, one of the 25 World Biodiversity Hotspots identified by the Conservation International, but also within the Caucasus-Anatolian-Hyrcanian Temperate Forests classified as one of the 200 Global Ecoregions (WWF & IUCN, 1994; Zazanashvili et al., 1999). Moreover, it lies within the North-eastern Anatolia Centre of Plant Diversity (SWA No.19) and covers the Karçal

*E-mail: eminagaoglu@hotmail.com

Mountains, designated as one of the 122 Important Plant Areas (IPA) in Turkey (Özhatay et al., 2003, 2005).

The study area is the most significant refuge and relict area for Tertiary Forests of Western Eurasia. Deciduous temperate forests are in uninterrupted existence in this region since Tertiary. The largest natural forest ecosystems of Europe and Mid-Asia are found in this region. The main ecosystem types are boreal coniferous forest and temperate deciduous forest (WWF & IUCN, 1994; Zazanashvili et al., 1999).

Some floristic studies were carried out in localities close to the research area by Anşin (1979), Düzenli (1988), Vural (1996), Güner & Duman (1998), Eminağaoğlu & Anşin (2003, 2004), and Eminağaoğlu et al. (2006). According to the *Flora of Turkey* (Davis, 1965-1985; Güner et al., 2000), many Turkish and foreign researchers have visited and collected plant specimens from around Artvin (Davis, 1965-1985; Mirov, 1967; Davis et al., 1988; Güner et al., 2000). Especially Duman and Güner have made collections from the Camili Biosphere Reserve area (KÇOSAD, 1994; Güner & Duman, 1997).

In this research, the flora of Camili (Borçka district), located in the western lesser Caucasus corridor, was studied. Data were collected within the study area of a project named "Caucasian Mixed Temperate Rain Forest and High Alpine Meadows", part of the grant agreement of the project "Biodiversity and Natural Resource Management" prepared by the Ministry of Environment and Forestry in collaboration with the World Bank and financed by the Global Environment Facility.

Study Area

The research area, Camili Biosphere Reserve, is located in Borçka district, 30 km north-west of Artvin, Turkey. It lies between the latitudes 41°20.49' and 41°31.32', and the longitudes 41°49.36' and 42°05.27'. The altitude of the area ranges from 370 m to 3435 m. Bordering with Georgia to the north, it is surrounded by high and very steep mountains all around. The Reserve lies within the Colchic sector of the Euro-Siberian floristic area in the Holarctic region (Davis, 1965; Zohary, 1973) and is situated in the A8-A9 squares according to Davis's grid system (Davis, 1965).

The vegetation map of the study area is shown in Figure 1. In the vicinity of the reserve, there are several

villages including Camili, Efeler, Maral, Uğur, Düzenli, and Kayalar along with many kışlas (pastures found in the lower parts of mountains) and yaylas (pastures found in the higher parts of mountains) that local people live in during spring and summer, respectively. The study area is a large watershed covering about 25,275 ha with 2 nature reserves, i.e. Camili-Gorgit Strict Nature Reserve (490.5 ha) and Camili-Efeler Forest Strict Nature Reserve (1453 ha).

Unfortunately, there is no meteorological station in the study area. The nearest stations are located in Borçka, south-west of the area at an altitude of 120 m. According to the values from Borçka station, data were obtained between 1971 and 1996 (DMİ, 2001), the mean annual temperature is 13.5 °C and precipitation is 1010.2 mm. The values of "M" and "m" of the hottest and coldest months were 27.1 and 1 °C, respectively. The coldest month is February, with a minimum temperature of -9.8 °C, and the hottest month is August, with a maximum temperature of 42.4 °C. The climatic diagram was prepared using Walter's method (Figure 2). The rainfall regime of the study area is "autumn-winter-summer-spring" of semi-terrestrial origin (Akman, 1999).

The geological structure of the research area mostly contains rocks belonging to the Upper Cretaceous period. There are 7 large soil groups in the study area, namely, brown forest soils, noncalcareous brown forest soils, alluvial soils, colluvial soils, red-yellow podzolic soils, and high mountain meadow soils (TGM, 1975, 1984; TKH, 1990). The most common of these soil groups is brown forest soils. Both brown forest soils and noncalcareous brown forest soils are generally found in forested lands. Areas with alpine vegetation generally consist of high mountain meadow soils while alluvial and colluvial soils are only present locally in streamsides and small plains.

Forest, alpine, subalpine, rocky, and hydrophytic are the main vegetation types in the study area. Forest vegetation is the most widespread in the study area.

Forest vegetation includes *Abies nordmanniana* (Stev.) Spach. subsp. *nordmanniana*, *Picea orientalis* (L.) Link, *Pinus sylvestris* L., *Taxus baccata* L., *Ulmus glabra* Huds., *Castanea sativa* Mill., *Fagus orientalis* Lipsky, *Quercus petraea*, (Matt.) Liebl. subsp. *iberica* (Steven ex M.Bieb.) Krassiln., *Populus tremula* L., *Salix caucasica* Andersson, *Carpinus betulus* L., *Corylus avellana* L., *Ostrya carpinifolia* Scop., *Rhododendron luteum* Sweet, *R.*

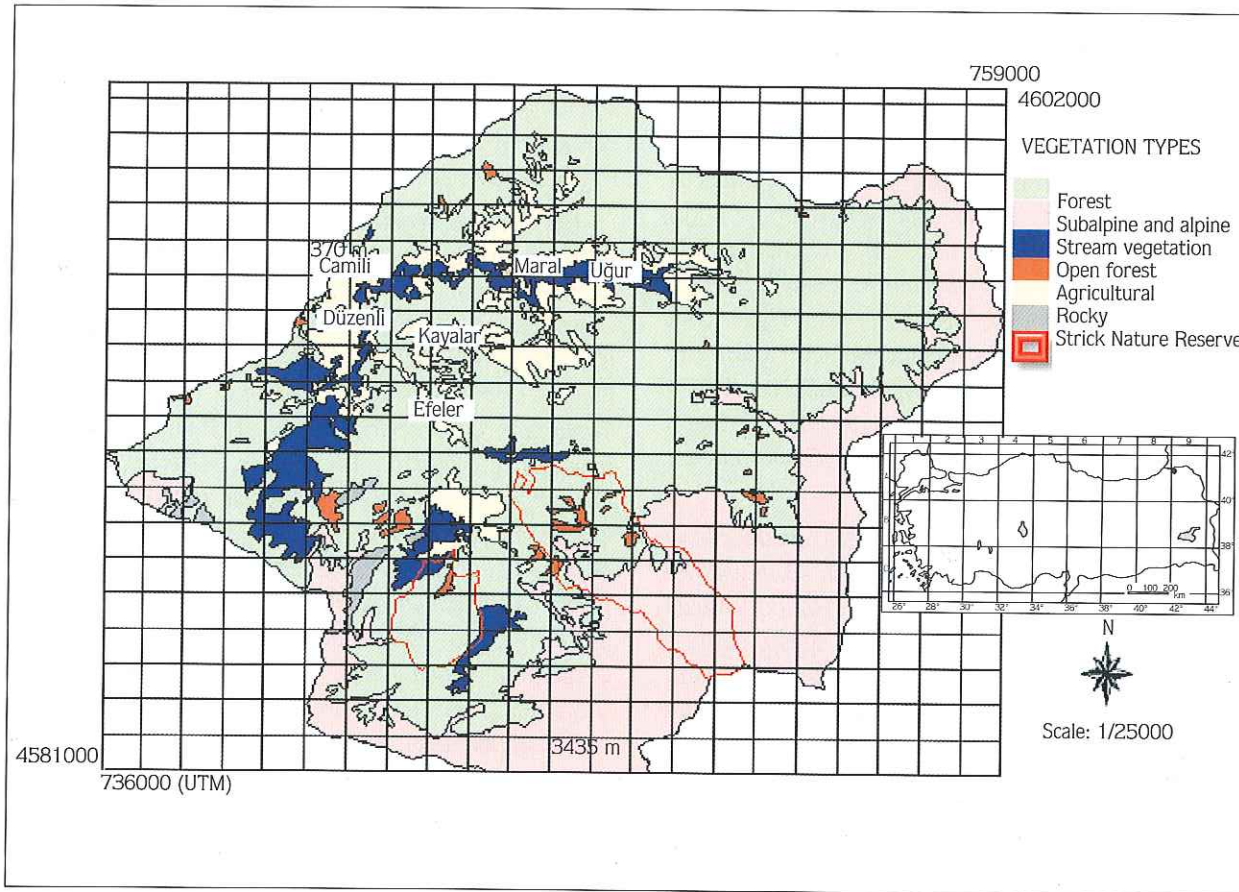

Figure 1. Vegetation map of the study area.

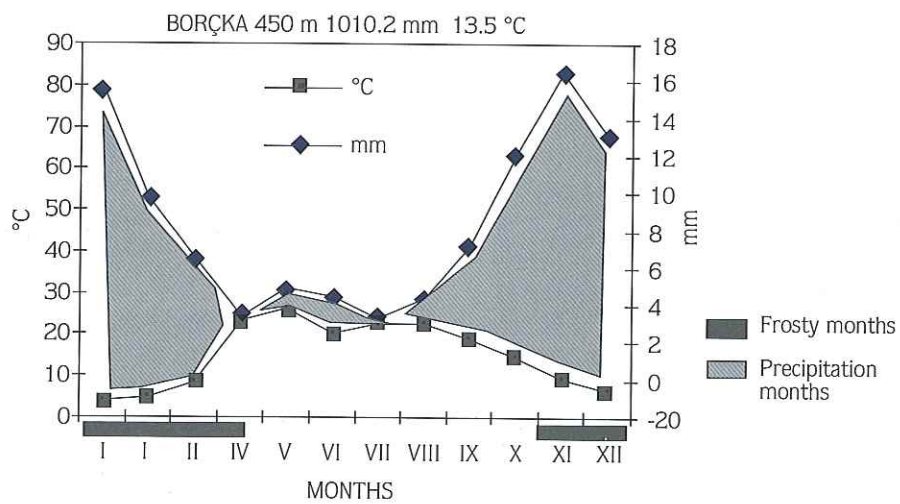

Figure 2. Climatic diagram of Borçka.

ponticum L. subsp. *ponticum* var. *ponticum*, *Laurocerasus officinalis* Roem., *Rubus platyphyllos* C.Koch, *Crataegus microphylla* C.Koch, *C. monogyna* Jacq. subsp. *monogyna*, *Ilex colchica* Pojark., *Acer campestre* L. var. *campestre*, *Fraxinus angustifolia* Vahl. subsp. *oxycarpa* (M.Bieb. ex Willd.) Franco & Rocha Afonso, *Sambucus nigra* L., *Tilia rubra* DC. subsp. *caucasica* (Rupr.) V.Eng., *Hedera helix* L., *H. colchica* (C.Koch) C.Koch, *Sanicula europaea* L., *Sedum stoloniferum* C.C.Gmel., *Silene compacta* Fisch., *Rumex acetocella* L., *Hypericum bupleuroides* Gris., *Alliaria petiolata* (M.Bieb.) Cavara & Grande, *Fragaria vesca* L., *Lathyrus laxiflorus* (Desf.) O.Kuntze subsp. *laxiflorus*, *Circea lutetiana* L., *Oxalis acetosella* L., *Geranium robertianum* L., *G. purpureum* Vill., and *Monotropa hypopithys* L.

Subalpine vegetation includes *Betula medwediewii* Regel, *B. recurvata* (I.V.Vassil.) A.V.Vassil., *B. litwinowii* Doluch., *Quercus pontica* C.Koch, *Rhododendron caucasicum* Pall., *Juniperus communis* L. subsp. *saxatilis* Pall., *Vaccinium myrtillus* L., *Daphne glomerata* Lam., *Acer trautvetteri* Medw., *Sorbus aucuparia* L., *Ribes biebersteinii* Berl. ex DC., *Rubus idaeus* L., *Sorbus umbellata* (Desf.) Fritsch. var. *cretica* (Lindl.) Schneid., *Lonicera caucasica* Pall. subsp. *caucasica*, *Viburnum lantana* L., *Empetrum nigrum* L. subsp. *hermaphroditum* (Hagerup) Böcher, *Silene alba* (Mill.) Krause subsp. *divaricata* (Rchb.) Walters, *Gentiana septemfida* Pall., *Scutellaria pontica* C.Koch, *Stachys macrantha* (C.Koch) Stearn, *Veronica peduncularis* M.Bieb., *Scilla siberica* Haw. subsp. *armena* (Grossh.) Mordak, and *Anemone narcissiflora* L. subsp. *narcissiflora*.

The characteristic taxa of alpine vegetation are *Sibbaldia parviflora* Willd. var. *parviflora*, *Stachys macrantha* (C.Koch) Stearn, *Thymus praecox* Opiz subsp. *grossheimii* (Ronniger) Jalas var. *grossheimii*, *Veronica gentianoides* Vahl., *Polygonum bistorta* L. subsp. *carneum* (Koch) Coode & Cullen, *Taraxacum crepidiforme* DC. subsp. *crepidiforme*, *Aconitum anthora* L., *Agrostis planifolia* C.Koch, *Alchemilla caucasica* Buser, *A. retinervis* Buser, *Anthemis marschalliana* Willd. subsp. *pectinata* (Boiss.) Grierson, *Aster alpinus* L., *Calamagrostis arundinaceae* (L.) Roth, *Campanula collina* Sims, *Carex atrata* L. subsp. *atrata*, *Coronilla orientalis* Mill. var. *balansae* (Boiss.) Hrabětova, *Cruciata taurica* (Pall. ex Willd.) Ehrend., *Deschampsia caespitosa* (L.) P.Beauv., *Erigeron caucasicus* Stev. subsp. *caucasicus*, *Gentiana septemfida* Pall., *G. verna* L. subsp. *pontica* (Soltok.)

Hayek, *Gentianella caucasica* (Lodd. ex Sims) Holub, *Myosotis sylvatica* Ehrh. ex Hoffm. subsp. *cyanea* Vestergr., *Pedicularis nordmanniana* Bunge, *Phleum alpinum* L., *Poa bulbosa* L., *P. longifolia* Trin., *Scabiosa caucasica* M.Bieb., *Tripleurospermum caucasicum* (Willd.) Hayek, and *Veratrum album* L.

Hydrophytic vegetation is found in streamside and lakeside. This vegetation is widespread along the edge of Camili Stream. The characteristic species of stream vegetation are *Alnus glutinosa* (L.) Gaertn. subsp. *barbata* (C.A.Mey.) Yalt., *Salix alba* L., *Tamarix tetrandra* Pall. ex Bieb., *Oplismenus undulatifolius* (Ard.) P.Beauv., *Thelypteris limbosperma* (All.) H.P.Fuchs, *Petasites hybridus* (L.) Gaertn., *P. albus* (L.) Gaertn., *Impatiens noli-tangere* L., *Mentha longifolia* (L.) Huds. subsp. *longifolia*, *Lythrum salicaria* L., *Polygonum amphibium* L., *Myriophyllum spicatum* L., *Alisma plantago-aquatica* L., *Veronica anagalis-aquatica* L., *Rhynchospora stricta* (C.Koch) Albov, *Caltha polypetala* Hoschst. ex Lorent, *Cardamine raphanifolia* Pourr. subsp. *acris* (Gris.) O.E.Schultz, *Primula auriculata* Lam., and *Equisetum ramosissimum* Desf.

Sedum album L., *S. gracile* C.A.Mey., *Centranthus longiflorus* Stev. subsp. *longiflorus*, *Potentilla oweriniana* Rupr. ex Boiss., *Scrophularia chrysantha* Jaub. & Spach, *Asphodeline lutea* (L.) Reichb., and *Campanula aucheri* A.DC. are commonly found in the rocky parts of the research area.

Materials and Methods

The materials of this study are some 2700 vascular plant specimens collected from Camili Biosphere Reserve Area between 2002 and 2005. At least 1 sample for each taxon was prepared by herbarium techniques (Erik et al., 1996) and kept at the Artvin Çoruh University, Faculty of Forestry Herbarium in Artvin. These specimens were mainly identified using the *Flora of Turkey* (Davis, 1965-1985; Davis et al., 1988; Güner et al., 2000), other floras (Komarov & Shishkin, 1933-1964; Grossheim, 1939-1967; Ketzkhoveli & Gagnidze, 1971-2001) and revisions (Leblebici, 1990; Aytaç, 1997; Doğan, 1999). The herbarium of the Faculty of Pharmacy, İstanbul University (ISTE), was used to check the specimens. The floristic elements are listed in the Appendix. All taxa in the floristic list are given according to the order in the *Flora of Turkey* (Davis, 1965-85). In the Appendix, every

species is represented with the following details: family and taxon name, authors of the species, geographical locations, habitats, altitudes, collection dates, and collectors' names and numbers. In addition, endemism, IUCN threat categories, their phytogeographical regions, and the life forms (according to the classification by Raunkiaer (Raunkiaer, 1934; Ellenberg & Mueller-Dombois, 1967) based on the location of overwintering, perennating parts) are given. Threatened categories are proposed for the endemic and some nonendemic taxa according to IUCN risk categories (Ekim et al., 2000; IUCN, 2001). The phytogeographical regions of the taxa were evaluated according to Davis (1965-85, 1988). Author abbreviations of plant names are given according to Brummitt & Powell (1992). The wild taxa were compared with floras of neighbouring areas (Anşın, 1979; Düzenli, 1988; Ocakverdi, 2001; Eminağaoğlu & Anşın, 2003, 2004). In order to compare floristic similarities, Sørensen's similarity formula was used (Sørensen, 1948). The abbreviations used in the text and in the floristic list are as follows: Cosm: Cosmopolitan; Euro-Sib: Euro-Siberian element; Eux: Euxine element; Hyrc-Eux: Hyrcano-Euxine element; Ir-Tur: Irano-Turanian element; Medit: Mediterranean element; E: East; mt: mountain; SNR: Strict Nature Reserve; CR: Critically endangered; EN: Endangered; LC: Least concern; NE: Not evaluated; NT: Near threatened; VU: Vulnerable; ÖE: Özgür Eminağaoğlu; AE: Arzu Ergül; Hcrp: Hemicryptophytes, Crp: Cryptophytes; Thp: Therophytes; Chp: Chamaephytes; Php: Phanerophytes; Vp: vasicular parasite. Euro-Sib (mt), Hyrc-Eux, Hyrc-Eux (mt), Eux, and Eux (mt) species were evaluated as subcategories of Euro-Sib, while Medit, E.Medit, and E.Medit (mt) species were evaluated as subcategories of the Mediterranean phytogeographical region.

Results and Discussion

The vascular plant flora of the Camili Biosphere Reserve area is represented by 990 taxa, 965 species, 14 subspecies, and 11 varieties belonging to 432 genera and 110 families (Appendix). Most of them belong to Spermatophyta (953 taxa) and the remainder belong to Pteridophyta (37 taxa). Gymnosperms and Angiosperms comprised 7 and 946 taxa, respectively. Of the Angiosperms, 796 taxa are Dicotyledonae and 150 taxa are Monocotyledonae. The dispersion of the plant taxa that were defined in the study area according to large taxonomical groups is shown in Table 1.

The area is a very important relictual refuge for many plant species that are remnants of an ancient Mediterranean flora such as *Periploca graeca* L. var. *graeca* (Asclepidaceae), *Cistus salviifolius* L. (Cistaceae), *Pistacia terebinthus* L. subsp. *palaestina* (Boiss.) Engler, *Cotinus coggygria* Scop., and *Rhus coriaria* L. (Anacardiaceae) (Eminağaoğlu et al., 2006). The uniqueness of the presence of many relict plant species in the region is largely due to the fact that the Caucasus was spared from the severe effects glacial retreats during the last Ice Age. The region is also unique with respect to the fact that there are many relict plant species including *Picea orientalis* (L.) Link, *Abies nordmanniana* (Stev.) Spach. subsp. *nordmanniana* (Pinaceae), *Betula medwediewii* Regel (Betulaceae), *Quercus pontica* C.Koch (Fagaceae), *Epigaea gaultherioides* (Boiss. & Ball) Takht., *Rhododendron ungeri* Trautv., *R. smirnovii* Trautv. (Ericaceae), *Osmanthus decorus* (Boiss. & Ball) Kasaplıgil (Oleaceae), and *Ruscus colchicus* Yeo (Liliaceae) (Zazanashvili et al., 1999).

The taxa of the study area, categorised according to phytogeographic regions, can be listed as follows: Euro-

Table 1. The dispersion of taxa into large taxonomical groups.

	Families	Genera	Species	Subsp.	Var.	Taxa	Endemics
Pteridophyta	14	17	37	-	-	37	-
Spermatophyta	96	415	928	14	11	953	23
Gymnospermae	3	5	7	-	-	7	-
Angiospermae	93	410	921	14	11	946	23
Dicotyledones	82	336	772	14	10	796	22
Monocotyledones	11	74	149	-	1	150	1
Total	110	432	965	14	11	990	23

Siberian elements 477 (48.2%), Irano-Turanian elements 35 (3.5%), and Mediterranean elements 19 (1.9%). The remaining 459 (46.4%) taxa are multi-regional or of unknown phytogeographic origin. In the area, Euro-Siberian elements are more common than the other phytogeographic region elements. The dominance of the Euro-Siberian elements is not surprising because the study area is located in the Euro-Siberian phytogeographic region. The fact that Irano-Turanian elements are the second most common ones in the research area shows that Continental climate has an important effect on the area. Fourteen (1.4%) of the Euro-Siberian elements and 1 (0.1%) of the Irano-Turanian elements are endemic to Turkey. The total endemism rate is 2.3%, with 23 taxa. A total of 23 taxa, all endemic, and 49 nonendemic taxa were evaluated according to IUCN risk categories (Ekim et al., 2000;

IUCN, 2001). The results are summarised in Table 2. The distribution of the threat categories is as follows: 1 endemic and 1 nonendemic taxa in CR, 1 endemic and 2 nonendemic taxa in EN, 4 endemic and 47 nonendemic taxa in VU, 6 endemic taxa in NT, 9 endemic taxa in LC, and 2 endemic taxa in NE.

The comparison of the distribution of the phytogeographic elements and endemism ratio in the study area and neighbouring regions is given in Table 3. According to this table, the endemism rate is highest in Hatila Valley (Eminağaoğlu & Anşin, 2003). The endemism rate of the study area is very low compared with the average endemism rate (34.5%) in the *Flora of Turkey* (Güner et al., 2000). In addition, the endemism rate of the Black Sea region is about 16% (Anşin et al., 2002).

Table 2. Distribution of the phytogeographic elements, endemic, nonendemic, and threat categories.

Phytogeographic regions	Endemics		Nonendemics		Total	
	Number	%	Number	%	Number	%

The main reason for the low endemism ratio observed in this study is the climatic and environmental similarities between Caucasian flora and the study area. Similar results were obtained from other floristic studies in the Eastern Black Sea region of Turkey (Anşin, 1979; Eminağaoğlu & Anşin, 2003, 2004). One of the most important causes of the low endemism rate in the study area was the occurrence of tree species in higher parts. As a result, species diversity was decreased due to decreasing resource availability, particularly the amount of light, and the fact that areas compatible for endemic species were narrowed. Especially at higher elevations, herb species were lacking and they were outcompeted by tree species (Kikvidze & Ohsawa, 2001; Yalçın et al., 2004). Hemicryptophytes prevailed in open physiognomies, whereas the phanerophytes were the best represented class in the closed ones (Batalha & Martins, 2004).

The Euro-Siberian elements seem to be dominant in all areas studied and the Irano-Turanian elements come second. In Mount Kısır (Ocakverdi, 2001), rates of Euro-Siberian and Irano-Turanian elements are approximately equal because this area is located in the Irano-Turanian phytogeographical region. The representation of Irano-Turanian taxa shows the effects of continental climate and the transitional character of the study area. In some local regions (i.e. along the stream banks) a minor number of Mediterranean taxa occurred.

The largest families in terms of number of genera were Compositae (50), Gramineae (35), Cruciferae (28), Labiatae (22), Leguminosae (20), Rosaceae (20), Umbelliferae (17), Boraginaceae (17), Liliaceae (14), Ranunculaceae (14), Caryophyllaceae (11), and Scrophulariaceae (11).

The richest families in terms of number of taxa were Compositae (114), Gramineae (69), Leguminosae (59), Rosaceae (59), Cruciferae (47), Scrophulariaceae (47), Labiatae (43), Boraginaceae (35), Ranunculaceae (35), Caryophyllaceae (33), Liliaceae (26), and Umbelliferae (25).

The total ratio of the 10 major families is 54.6%, with the remaining families comprising 45.4%. The major family order in our study is concordant with the *Flora of Turkey* (Güner et al., 2000). A comparison of families in terms of the largest number of species found in this study and in previous studies carried out in nearby regions is given in Table 4. The results of this study are in agreement with those of other similar studies (Anşin, 1979; Düzenli, 1988; Ocakverdi, 2001; Eminağaoğlu & Anşin, 2003, 2004). Differences in several families might be due to the results of dissimilarities in climates and habitats. Compositae (the largest family in our list) is not only the largest family in the *Flora of Turkey* (Güner et al., 2000), but also the largest and most widespread family of flowering plants in the world (Good, 1974).

Table 4. Comparison of 10 families containing the most species in studies conducted in nearby regions (abbreviations are below Table 3).

Families	Compared studies (%)					
	Cam.	KS.	Hat.	Kıs.	Tir.	Mer.

Labiatae	4,3	5.9	5.5	5.7	4.7	5.1
Boraginaceae	3,5	3.1	2.9	3.5	2.5	2.0
Ranunculaceae	3,5	3.1	3.7	4.3	2.7	3.1
Caryophyllaceae	3,3	4.5	3.2	5.2	5.2	3.1

The richest genera in terms of the number of taxa were *Veronica* L. (15), *Campanula* L. (15), *Geranium* L. (13), *Trifolium* L. (12), *Carex* L. (12), *Ranunculus* L. (12), *Vicia* L. (10), *Myosotis* L. (10), *Sedum* L. (10), *Potentilla* L. (9), *Poa* L. (9), and *Astragalus* L. (8).

In this study, we were unable to collect some taxa that were cited in the *Flora of Turkey*. These are *Laserpitium affine* Ledeb. (Apiaceae), *Hieracium artvinense* (Woron. & Zahn) Juxip, *H. subartvinense* Juxip, *H. insolitum* (Zahn) Juxip (Compositae), and *Paracolpodium colchicum* (Albov) Tzvelev (Poaceae).

Pielou (1975) and Magurran (1988) pointed out that taxonomic diversity will be higher in an area in which the species are divided amongst many genera as opposed to one in which most species belong to the same genus, and even higher if these genera are divided amongst many families as opposed to few. Species:genera and genera:families ratios for the study area, neighbouring regions, and Turkey are given in Table 5. Camili and neighbouring areas (lower ratios) are more diverse than Turkey. The other significant reason for lower taxonomic diversity was decreasing resource availability due to the low amount of light, as indicated earlier.

According to Sørensen's similarity formula, the comparison of the floristic similarity in the study area and neighbouring regions is given in Table 6. The floristic resemblance varies between 16.3 and 72.3 and the highest resemblance was obtained by Eminağaoğlu & Anşın (2004). The floristic composition of the study area was similar to that of Karagöl-Sahara National Park and Hatila Valley National Park, while low similarity was found for Mount Kısır. Although a continental climate was partly seen in the study area, most of the study area belonged to the Euro-Siberian phytogeographical region and the effects of oceanic climate were more probable. In

Table 6. Comparison of the flora of the study area with other studies by Sørensen's (1948) formula (abbreviations are below Table 3).

	Compared studies (%)			
	KS.	Hat.	Kis.	Mer.
Cam.	72.3	60.3	14.0	28.8
KS.		62.3	20.1	29.0
Hat.			22.4	34.5
Kis.				16.3

Mount Kısır, however, the continental climate was much more severe than that of the study area and there were remarkable differences between both areas in terms of the floristic composition and openness to forest vegetation.

The life-form spectrum in the present study is given in Figure 3. The life-form spectrum of the taxa was as follows: hemicryptophytes 359 (36.3%), cryptophytes 272 (27.5%), therophytes 162 (16.4%), chamaephytes 130 (13.1%), phanerophytes 63 (6.4%), and vasicular

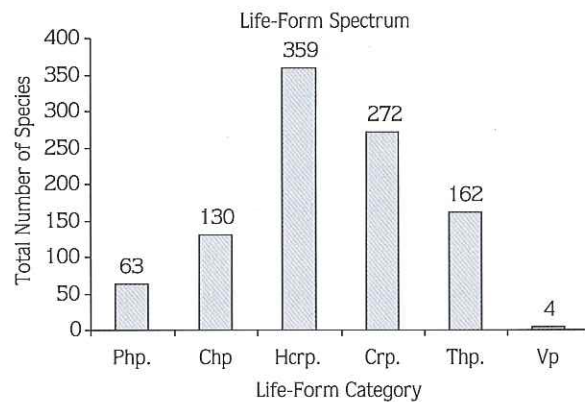

Figure 3. Life-form spectrum of the vascular flora of Camili.

Table 5. Comparative floristic richness and taxonomic diversity (abbreviations are below Table 3).

	Compared studies					
	Cam.	KS.	Hat.	Kis.	Mer.	Tur.
Total number of taxa (T)	990	863	769	578	635	10754
Total number of genera (G)	432	364	374	266	491	1168
Total number of families(F)	110	91	95	60	123	163
T/G	2.3	2.4	2.1	2.2	1.3	9.2
G/F	3.9	4.0	3.9	4.4	4.0	7.2

parasite 4 (0.4%). Hemicryptophytes were the best represented class in the study area. Hemicryptophytes were followed by cryptophytes with underground renewing buds. This could be explained by the inclusion of young individuals of phanerophytes as chamaephytes in the vegetation spectrum. These were followed by therophytes with an annual cycle as invaders and weedy species tend to be annuals (Batalha & Martins, 2004).

APPENDIX

The Floristic List

PTERIDOPHYTA

EQUISETACEAE

Equisetum hyemale L.

A8 Artvin: Borçka, Camili, open forest, 550 m, 19.04.2003, ÖE 5880.

Crp.

E. ramosissimum Desf.

A8 Artvin: Borçka, Düzenli, lakeside, 1535 m, 07.09.2003, ÖE 6659.

Crp.

E. fluviatile L.

A8 Artvin: Borçka, Düzenli, wet places, 1350 m, 11.06.2004, ÖE 6862; A8 Artvin: Borçka, Camili, wet places, 400 m, 13.09.2004, ÖE 7332.

Crp.

E. palustre L.

A8 Artvin: Borçka, Camili, open forest, 400 m, 06.06.2003, ÖE 5996.

Crp.

E. arvense L.

A8 Artvin: Borçka, Efeler, streamsides, 1200 m., 07.09.2003, ÖE 6660; A8 Artvin: Borçka, Kayalar, forest, 1600 m, 16.04.2004, ÖE 6765.

Crp.

E. telmateia Ehrh.

A8 Artvin: Borçka, Maral, forest, 700 m, 04.04.2003, ÖE 5869.

Crp.

LYCOPODIACEAE

Lycopodium selago L.

A8 Artvin: Borçka, Kayalar, forest, 1200 m, 15.08.2003, ÖE 6484; A8 Artvin: Borçka, Efeler SNR, stony and rocky places, 1850 m, 13.09.2004, ÖE 7333.

Crp.

L. clavatum L.

A8 Artvin: Borçka, Efeler, forest, 800 m, 11.07.2003, ÖE 6207.

Crp.

L. alpinum L.

A9 Artvin: Borçka, Efeler SNR, forest, 1400 m, 21.08.2003, ÖE 6617.

Crp.

L. complanatum L. subsp. *chamaecharissus* (A.Br.) Döll

A8 Artvin: Borçka, Maral, forest, 700 m, 23.06.2003, ÖE 6076.

Crp.

SELAGINELLACEAE

Selaginella helvetica (L.) Spring

A9 Artvin: Borçka, Efeler SNR, forest, 1300 m, 11.06.2004, ÖE 6863.

Euro-Sib., Crp.

OSMUNDACEAE

Osmunda regalis L.

A8 Artvin: Borçka, Uğur, open forest, 700 m, 08.07.2004, ÖE 7086.

Crp.

ADIANTHACEAE

Adiantum capillus-veneris L.

A8 Artvin: Borçka, Camili, open forest, 400 m, 15.08.2003, ÖE 6485.

Euro-Sib., Crp.

PTERIDACEAE

Pteris cretica L.

A8 Artvin: Borçka, Efeler, roadside, 800 m, 11.07.2005, AE 13.

Crp.

CRYPTOGRAMMACEAE

Cryptogramma crispa (L.) R.Br. ex Hook.

A9 Artvin: Borçka, Mereta to Efeler, stony slopes, 2400 m, 22.08.2004, ÖE 7305.

Euro-Sib., Crp.

HYPOLEPIDACEAE

Pteridium aquilinum (L.) Kuhn

A9 Artvin: Borçka, Beyazsu Yaylası, alpine vegetation, 2000 m, ÖE 6038; A8 Artvin: Borçka, Kayalar, forest, 1470 m, 07.09.2003, ÖE 6661; A8 Artvin: Borçka, Efeler, *Picea orientalis* forest, 1350 m, 28.09.2003, ÖE 6719.

Crp.

THELYPTERIDACEAE

Thelypteris phegopteris (L.) Sloss.

A8 Artvin: Borçka, Efeler, stony and rocky places, 1600 m, 14.10.2003, ÖE 6734.

Crp.

T. limbosperma (All.) H.P.Fuchs

A8 Artvin: Borçka, Maral, streamsides, with *Alnus glutinosa*, 1600 m, 29.07.2003, ÖE 6436; A8 Artvin: Borçka, Efeler, *Picea orientalis* forest, streamsides, 1470 m, 07.09.2003, ÖE 6662.

Crp.

ASPLENIACEAE

Asplenium trichomanes L.

A8 Artvin: Borçka, Maral, open forest, 1570 m, 11.07.2003, ÖE 6208; A8 Artvin: Borçka, Efeler, rocky places, 1300 m, 07.09.2003, ÖE 6663; A8 Artvin: Borçka, Efeler, mixed forest, 1650 m, 13.09.2004, ÖE 7335.

Crp.

A. viride Huds.

A8 Artvin: Borçka, Uğur, open forest, 1200 m, 14.08.2005, AE 22.

Crp.

A. adiantum-nigrum L.

A8 Artvin: Borçka, Düzenli, open forest, 1450 m, 15.08.2003, ÖE 6486; A8 Artvin: Borçka, Uğur, forest, 700 m, 10.05.2004, ÖE 6766; A8 Artvin: Borçka, Uğur, forest, 1700 m, 13.09.2004, ÖE 7336.

Crp.

A. septentrionale (L.) H.Hoffm. subsp. *septentrionale*

A9 Artvin: Borçka, Yıldız Lake, alpine vegetation, 2400 m, 15.08.2003, ÖE 6487; A8 Artvin: Borçka, Kayalar, on rock, 1350 m, 29.07.2003, ÖE 6437; A8 Artvin: Borçka, Efeler, damp place, 1300 m, 13.09.2004, ÖE 7337.

Crp.

A. ruta-maria L.

A8 Artvin: Borçka, Efeler, 1690 m, open forest, 1670 m, 13.09.2004, ÖE 7338.

Crp.

A. woronowii H.Christ

A8 Artvin: Borçka, Düzenli, Mahmudikaya, rocky slopes, 1900 m, 22.08.2004, ÖE 7306.

Crp.

Ceterach officinarum DC.

A8 Artvin: Borçka, Düzenli, amongst rock, 1450 m, 07.09.2003, ÖE 6664.

Crp.

Phyllitis scolopendrium (L.) Newman

A8 Artvin: Borçka, Kayalar, forest, 1800 m, 11.06.2004, ÖE 6864.

V. major L. subsp. *hirsuta* (Boiss.) Stearn

A8 Artvin: Borçka, Camili, open forest, 400 m, 25.05.2003, ÖE 5981.

Eux., Chp.

ASCLEPIADACEAE

Periploca graeca L. var. *graeca*

A9 Artvin: Borçka, Camili, open forest, 600 m, 27.05.2004, ÖE 6821.

E.Medit., Chp.

Vincetoxicum scandens Somm. & Lev.

A8 Artvin: Borçka, Kayalar, forest, 1800 m, 11.07.2003, ÖE 6361.

Hcrp.

GENTIANACEAE

Centaurium erythraea Rafn subsp. *erythraea*

A8 Artvin: Borçka, Camili, in scrub, 1350 m, 11.06.2004, ÖE 7012; A8 Artvin: Borçka, Uğur, open forest, 700 m, 08.07.2004, ÖE 7190.

Euro-Sib., Crp.

Gentiana asclepiadea L.

A8 Artvin: Borçka, Efeler, damp places, 1850 m, 07.09.2003, ÖE 6700.

Euro-Sib., Hcrp.

G. pyrenaica L.

A9 Artvin: Borçka, Gorgit SNR, alpine vegetation, 2450 m, 11.07.2003, ÖE 6362.

Euro-Sib., Crp.

G. septemfida Pall.

A9 Artvin: Borçka, Gorgit SNR, alpine vegetation, 2450 m, 11.07.2003, ÖE 6363.

Hycr-Eux. (mt), Hcrp.

G. verna L. subsp. *pontica* (Soltok.) Hayek

A9 Artvin: Borçka, Mereta to Efeler, alpine vegetation, 2400 m, 25.05.2003, ÖE 5982.

Hycr-Eux. (mt), Hcrp.

Gentianella ciliata (L.) Borkh. subsp. *blepharophora* (Bordz.) Pritch.

A9 Artvin: Borçka, Efeler SNR, subalpine vegetation, 1900 m, 07.09.2003, ÖE 6701.

Hycr-Eux. (mt), Hcrp.

G. caucasea (Lodd. ex Sims) Holub

A9 Artvin: Borçka, Yıldız Lake, subalpine vegetation, 2100 m, 15.08.2003, ÖE 6571.

Eux. (mt), Hcrp.

Swertia iberica Fisch. ex C.A.Mey.

A9 Artvin: Borçka, Mereta to Efeler, alpine vegetation, damp place, 2000 m, 07.09.2003, ÖE 6702; A9 Artvin: Borçka, Beyazsu Yaylası, alpine vegetation, 2000 m, 08.09.2005, AE 28.

Eux. (mt), Hcrp.

CONVOLVULACEAE

Convolvulus cantabrica L.

A8 Artvin: Borçka, Camili, roadsides, 450 m, 25.05.2003, ÖE 5983.

Chp.

C. arvensis L.

A9 Artvin: Borçka, Yıldız Lake, open places, 1850 m, 07.09.2003, ÖE 6703.

Cosm., Hcrp.

Calystegia silvatica (Kit.) Griseb.

A8 Artvin: Borçka, Düzenli, roadsides, 1500 m, 21.08.2003, ÖE 6650; A8 Artvin: Borçka, Efeler, roadsides, 800 m, 28.07.2004, ÖE 7282.

GRAMINEAE (POACEAE)

Brachypodium sylvaticum (Huds.) P.Beauv.

A8 Artvin: Borçka, Maral, meadows, 1650 m, 23.06.2003, ÖE 6191.

Euro-Sib., Widespread, Hcrp.

B. pinnatum (L.) P.Beauv.

A9 Artvin: Borçka, Mereta to Efeler, alpine meadows, 2100 m, 11.07.2003, ÖE 6415; A8 Artvin: Borçka, Uğur, open forest, 700 m, 08.07.2004, ÖE 7217.

Euro-Sib., Crp.

Elymus nodosus (Nevski) Melderis subsp. *sinuatus* (Nevski) Melderis

A8 Artvin: Borçka, Maral, open places, 1100 m, 23.06.2003, ÖE 6192; A8 Artvin: Borçka, Efeler, stony slopes, 1600 m, 27.05.2004, ÖE 6857.

Ir-Tur., Hcrp.

E. repens (L.) Gould subsp. *repens*

A9 Artvin: Borçka, Efeler SNR, open places, 1800 m, 11.07.2003, ÖE 6416; A9 Artvin: Borçka, Mereta to Efeler, alpine meadows, 2350 m, 15.08.2003, ÖE 6606; A9 Artvin: Borçka, Gorgit SNR, forest margins, 2200 m, 28.07.2004, ÖE 7298.

Crp.

Hordeum bulbosum L.

A8 Artvin: Borçka, Kayalar, forest, 1750 m, 23.06.2003, ÖE 6194; A8 Artvin: Borçka, Camili, meadows, 1250 m, 08.07.2004, ÖE 7218.

Widespread, Chp.

Hordelymus europaeus (L.) Jess.

A9 Artvin: Borçka, Gorgit SNR, mixed forest, 1850 m, 25.05.2003, ÖE 5938; A8 Artvin: Borçka, Camili, meadows, 1200 m, 23.06.2003, ÖE 6193; A8 Artvin: Borçka, Maral, meadows, 850 m, 27.05.2004, ÖE 6858; A9 Artvin: Borçka, Camili, forest, 400 m, 28.07.2004, ÖE 7299.

Euro-Sib., Hcrp.

Bromus racemosus L.

A8 Artvin: Borçka, Camili, wet meadows, 1250 m, 08.07.2004, ÖE 7219.

Euro-Sib., Thp.

B. arvensis L.

A8 Artvin: Borçka, Efeler, slopes, 1100 m, 08.07.2004, ÖE 7220.

Thp.

B. japonicus Thunb. subsp. *japonicus*

A8 Artvin: Borçka, Efeler, open places, 1800 m, 11.07.2003, ÖE 6417; A8 Artvin: Borçka, Kayalar, forest, 1600 m, 08.07.2004, ÖE 7221.

Widespread, Thp.

B. tectorum L.

A9 Artvin: Borçka, Yıldız Lake, open places, 1900 m, 25.05.2003, ÖE 5939; A9 Artvin: Borçka, Beyazsu Yaylası, open grasslands, 2000 m, 11.06.2004, ÖE 7078; A9 Artvin: Borçka, Mereta to Efeler, alpine meadows, 2300 m, 08.07.2004, ÖE 7222.

Widespread, Thp.

B. erectus Huds.

A8 Artvin: Borçka, Düzenli, roadsides, 1250 m, 28.07.2004, ÖE 7300.

Crp.

Avena fatua L. var. *fatua*

A8 Artvin: Borçka, Uğur, open forest, 900 m, 11.06.2004, ÖE 7079.

Thp.

A. sterilis L. subsp. *ludoviciana* (Durieu) Gillet & Magne

A8 Artvin: Borçka, Efeler, meadows, 1550 m, 25.05.2003, ÖE 5940.

Thp.

A. sativa L.

A8 Artvin: Borçka, Kayalar, in fields, 1100 m, 11.07.2003, ÖE 6418.

Thp.

Trisetum rigidum (M.Bieb.) Roem. & Schult.

A8 Artvin: Borçka, Efeler, alpine meadows, 2400 m, 11.07.2003, ÖE 6420; A8 Artvin: Borçka, Düzenli, Verketil, alpine slopes, 2450 m, 15.08.2003, ÖE 6607; ibid., 07.09.2003, ÖE 6715.

Ir-Tur., Hcrp.

T. flavescens (L.) P.Beauv.

A8 Artvin: Borçka, Kayalar, forest, 1800 m, 06.06.2003, ÖE 6073; A8 Artvin: Borçka, Efeler, alpine meadows, 2400 m, 11.07.2003, ÖE 6419; A9 Artvin: Borçka, Yıldız Lake, alpine meadows, 2400 m, 29.07.2003, ÖE 6480.

Euro-Sib., Hcrp.

Deschampsia caespitosa (L.) P.Beauv.

A8 Artvin: Borçka, Efeler, wet meadows, 2300 m, 11.07.2003, ÖE 6421.

Widespread, Chp.

Calamagrostis arundinacea (L.) Roth

A9 Artvin: Borçka, Mereta to Efeler, alpine slopes, 2350 m, 15.08.2003, ÖE 6608; A8 Artvin: Borçka, Uğur, open forest, 1700 m, 28.07.2004, ÖE 7301.

Euro-Sib., Crp.

Agrostis olympica (Boiss.) Bor

A8 Artvin: Borçka, Kayalar, forest, 1800 m, 29.07.2003, ÖE 6481; A8 Artvin: Borçka, Efeler, meadows, 1400 m, 15.08.2003, ÖE 6609.

Euro-Sib. (mt), Hcrp.

A. planifolia C.Koch.

A9 Artvin: Borçka, Gorgit SNR, forest, 2200 m, 28.07.2004, ÖE 7302.

Ir-Tur., Hcrp.

A. gigantea Roth

A9 Artvin: Borçka, Efeler SNR, streamsides, 1850 m, 11.07.2003, ÖE 6422.

Euro-Sib., Crp.

A. capillaris L. var. *capillaris*

A9 Artvin: Borçka, Beyazsu Yaylası, alpine meadows, 2000 m, 28.07.2004, ÖE 7303; A9 Artvin: Borçka, Yıldız Lake, alpine slopes, 2400 m, 08.07.2004, ÖE 7223; ibid., 2400 m, 13.09.2004, ÖE 7373.

Crp.

Polypogon viridis (Gouan) Breistr.

A8 Artvin: Borçka, Camili, streamsides, 1200 m, 08.07.2004, ÖE 7224.

Euro-Sib., Widespread, Hcrp.

Milium effusum L.

A9 Artvin: Borçka, Gorgit SNR, forest, 1300 m, 23.06.2003, ÖE 6197.

Crp.

Phalaris arundinacea L.

A9 Artvin: Borçka, Yıldız Lake, open places, 1900 m, 15.08.2003, ÖE 6610.

Crp.

- Alopecurus aequalis* Sobol.
A9 Artvin: Borçka, Yıldız Lake, damp places, 1900 m, 23.06.2003, ÖE 6198.
Euro-Sib., Thp.
A. arundinaceus Poir.
A8 Artvin: Borçka, Düzenli, Verketil, damp places, 2340 m, 10.05.2004, ÖE 6788.
Euro-Sib., Widespread, Crp.
Phleum alpinum L.
A8 Artvin: Borçka, Efeler, alpine slopes, 2350 m, 23.06.2003, ÖE 6199.
Euro-Sib., Crp.
P. pratense L.
A9 Artvin: Borçka, Gorgit SNR, damp places, 1800 m, 15.08.2003, ÖE 6611.
Euro-Sib., Widespread, Chp.
P. paniculatum Huds. subsp. *ciliatum* (Boiss.) M.Doğan
A8 Artvin: Borçka, Efeler, rocky slopes, 1800 m, 11.06.2004, ÖE 7080.
Ir-Tur., Thp.
P. montanum C.Koch. subsp. *montanum*
A9 Artvin: Borçka, Yıldız Lake, forest margins, 1900 m, 08.07.2004, ÖE 7225.
Chp.
P. exaratum Hochst. ex Griseb. subsp. *exaratum*
A9 Artvin: Borçka, Yıldız Lake, forest, 1900 m, 08.07.2004, ÖE 7226.
Widespread, Thp.
Festuca gigantea (L.) Vill.
A9 Artvin: Borçka, Beyazsu Yaylası, wet places, 2000 m, 28.07.2004, ÖE 7304.
Euro-Sib., Chp.
F. drymeja Mert. & Koch
A9 Artvin: Borçka, Efeler SNR, open forest, 1800 m, 08.07.2004, ÖE 7227.
Euro-Sib., Hcrp.
F. arundinacea Schreb. subsp. *arundinacea*
A8 Artvin: Borçka, Maral, forest, 700 m, 11.07.2003, ÖE 6423.
Chp.
F. artvinensis Markgr.-Dann.
A9 Artvin: Borçka, Mereta to Efeler, alpine meadows, 2350 m, 23.06.2003, ÖE 6200; A8 Artvin: Borçka, Düzenli, Mahmudikaya, rocky slopes, 1900 m, 11.07.2003, ÖE 6425.
Eux., Chp.
F. airoides Lam.
A9 Artvin: Borçka, Beyazsu Yaylası, alpine meadows, 2000 m, 11.07.2003, ÖE 6424; A8 Artvin: Borçka, Efeler, alpine meadows, 2300 m, 11.07.2003, ÖE 6426; ibid., 2400 m, 15.09.2003, ÖE 6612.
Euro-Sib. (mt), Chp.
Lolium perenne L.
A8 Artvin: Borçka, Efeler, meadows, 1350 m, 25.05.2003, ÖE 5941.
Euro-Sib., Hcrp.
L. rigidum Gaudin var. *rigidum*
A8 Artvin: Borçka, Efeler, meadows, 1550 m, 23.06.2003, ÖE 6201.
Thp.
Poa annua L.
A8 Artvin: Borçka, Kayalar, forest, 1800 m, 11.07.2003, ÖE 6427.
Cosm., Thp.
P. trivialis L.
A8 Artvin: Borçka, Efeler, alpine grassy steppe, 2250 m, 15.08.2003, ÖE 6613; A9 Artvin: Borçka, Beyazsu Yaylası, alpine grassy steppe, 2000 m, 08.07.2004, ÖE 7228.
Chp.
P. pratensis L.
A9 Artvin: Borçka, Mereta to Efeler, alpine pastures, 2400 m, 11.07.2003, ÖE 6428.
Widespread, Crp.
P. angustifolia L.
A8 Artvin: Borçka, Camili, in scrub, 1250 m, 08.07.2004, ÖE 7229.
Widespread, Crp.
P. longifolia Trin.
A8 Artvin: Borçka, Efeler, alpine pastures, 2300 m, 11.07.2003, ÖE 6429.
Eux., Crp.
P. diversifolia (Boss. & Ball) Hackel ex Boiss.
A8 Artvin: Borçka, Camili, meadows, 1250 m, 11.07.2003, ÖE 6430.
E. Medit. (mt), Chp.
P. nemoralis L.
A8 Artvin: Borçka, Efeler, meadows, 1550 m, 23.06.2003, ÖE 6202; A8 Artvin: Borçka, Maral, meadows, 1600 m, 15.08.2003, ÖE 6614; A9 Artvin: Borçka, Efeler SNR, streamsides, 1800 m, 08.07.2004, ÖE 7230.
Widespread, Chp.
P. alpina L. subsp. *fallax* F.Herm.
A9 Artvin: Borçka, Beyazsu Yaylası, alpine slopes, 2000 m, 29.07.2003, ÖE 6482; A8 Artvin: Borçka, Efeler, alpine slopes, 2350 m, 15.08.2003, ÖE 6615.
Chp.
P. bulbosa L.
A9 Artvin: Borçka, Mereta to Efeler, rocky slopes, 2300 m, 11.07.2003, ÖE 6431.
Chp.
Catabrosella variegata (Boiss.) Tzelev var. *variegata*
A9 Artvin: Borçka, Yıldız Lake, alpine pastures, 2400 m, 21.08.2003, ÖE 6656; A8 Artvin: Borçka, Düzenli, Mahmudikaya, rocky slopes, 2000 m, 08.07.2004, ÖE 7231; A9 Artvin: Borçka, Mereta to Efeler, alpine pastures, 2400 m, 08.07.2004, ÖE 7232.

Dactylis glomerata L. subsp. *hispanica* (Roth) Nyman
A8 Artvin: Borçka, Efeler, roadsides, 800 m, 11.07.2003, ÖE 6432; A8 Artvin: Borçka, Maral, stony slopes, 1150 m, 08.07.2004, ÖE 7233.
Crp.
Cynosurus cristatus L.
A8 Artvin: Borçka, Efeler, meadows, 1550 m, 23.06.2003, ÖE 6204; A8 Artvin:

Borçka, Camili, open forest, 800 m, 29.07.2003, ÖE 6483.

Euro-Sib., Hcrp.

C. echinatus L.

A8 Artvin: Borçka, Efeler, roadsides, 800 m, 25.05.2003, ÖE 5942; A8 Artvin: Borçka, Maral, in fields, 1650 m, 15.08.2003, ÖE 6616.

Medit., Thp.

Briza media L.

A8 Artvin: Borçka, Kayalar, meadows, 1400 m, 11.07.2003, ÖE 6433.

Crp.

B. marcowiczii Woron.

A9 Artvin: Borçka, Gorgit SNR, slopes, 2200 m, 23.06.2003, ÖE 6203; A8 Artvin: Borçka, Efeler Yaylası, grassy places, 2200 m, 08.07.2004, ÖE 7234.

Eux. (mt), Crp.

B. minor L.

A8 Artvin: Borçka, Düzenli, roadsides, 900 m, 27.05.2004, ÖE 6859.

Thp.

Melica uniflora Retz.

A9 Artvin: Borçka, Efeler SNR, stony slopes, 1650 m, 23.06.2003, ÖE 6205; A8 Artvin: Borçka, Kayalar, forest, 1400 m, 08.07.2004, ÖE 7235; A9 Artvin: Borçka, Beyazsu Yaylası, rocky slopes, 2000 m, 08.07.2004, ÖE 7236.

Euro-Sib., Crp.

Glyceria fluitans (L.) R.Br.

A9 Artvin: Borçka, Mereta to Efeler, open slopes, 1400 m, 13.09.2004, ÖE 7374.

Hcrp.

G. plicata (Fr.) Fr.

A8 Artvin: Borçka, Efeler, forest margins, 1800 m, 07.09.2003, ÖE 6716.

Widespread, Hcrp.

Molinia caerulea (L.) Moench

A8 Artvin: Borçka, Düzenli, Mahmudikaya, rocky slopes, 1900 m, 27.05.2004, ÖE 6860; A8 Artvin: Borçka, Kayalar, forest, 1600 m, 22.08.2004, ÖE 7331.

Crp.

Nardus stricta L.

A9 Artvin: Borçka, Gorgit SNR, slopes, 2200 m, 23.06.2003, ÖE 6206; A9 Artvin: Borçka, Mereta to Efeler, alpine pastures, 2450 m, 11.07.2003, ÖE 6434; A9 Artvin: Borçka, Mereta to Efeler, alpine pastures, 2350 m, 08.07.2004, ÖE 7237.

Euro-Sib., Hcrp.

Stipa bromoides (L.) Dörfler

A8 Artvin: Borçka, Maral, open places, 900 m, 11.06.2004, ÖE 7081.

Medit., Crp.

Piptatherum virescens (Trin.) Boiss.

A8 Artvin: Borçka, Camili, open forest, 400 m, 11.06.2004, ÖE 7082.

Crp.

Arundo donax L.

A8 Artvin: Borçka, Camili, streamsides, 400 m, 07.10.2004, ÖE 7378.

Crp.

Cynodon dactylon (L.) Pers. var. *dactylon*

A8 Artvin: Borçka, Camili, open forest, 900 m, 11.06.2004, ÖE 7083.

Crp.

Oplismenus undulatifolius (Ard.) P.Beauv.

A8 Artvin: Borçka, Efeler, streamsides, 800 m, 11.06.2004, ÖE 7084.

Hcrp.

Digitaria ciliaris (Retz.) Koeler

A8 Artvin: Borçka, Maral, forest, 700 m, 11.06.2004, ÖE 7085.

Thp.

Setaria glauca (L.) P.Beauv.

A8 Artvin: Borçka, Kayalar, waste places, 1000 m, 08.07.2004, ÖE 7238.

Thp.

Saccharum ravennae (L.) Murray

A8 Artvin: Borçka, Efeler, streamsides, 800 m, 07.09.2003, ÖE 6717.
